PROJECTS

eCommerce site (Shopify)

In today's era, we know that eCommerce is most popular everywhere and easy to use for all. It's just like all things in your hand, you have to click a single button and the thing is in front of your door.

In the eCommerce site add to cart functionality is the most necessary and important and also all other functions like a wish list, track order, Third party app integrations like subscriptions and product customizer, so on., and Different kind of payment methods, another functionality is made by using javascript and liquid language

[02/01/2021 – 08/03/2021] **iDiscuss Forum**

iDiscuss Forum is a web application developed in PHP intended for people to discuss specific topics. iDiscuss allows people to post their thoughts and problems and other people can provide views on it. It brings together people with different perspectives so they can understand each other better, and empowers everyone to share their knowledge for the benefit of the rest of the world.

Used PHP, JavaScript in the front end, and Node.js and express backend

[04/02/2020 – 03/05/2020] **Online hotel management system**

Used ASP .NET and C# in the front end and SQL in the backend

Online hotel management system is a web application developed in ASP.NET intended to ease the process of hotel booking with user authentication and authorization.

It stores the rates and inventories of the hotel rooms as well as the information of clients. It also allows customers to make online transactions.
